

# Feed Management Tips

## TILAPIA

Consult your  
feeding table

1

Sample your fish to determine the average size for the appropriate pellet size.

2

Based on the fish size, determine the correct amount of feed for your fish per day to prevent waste.

3

Don't switch to larger pellet sizes too soon.

- Ensure the fish can consume the feed properly.

4

Always bring an extra portion of feed when going to the cages as fish may have increased appetite.

5

Start feeding at least one hour after sunrise, with the final portion given two hours before sunset.

6

Spread the feed over a wide area of the cage to ensure all fish have access.

7

If fish are still very active around the feeding area, consider providing a little extra feed.

8

Always observe the activity of your fish to fine-tune your feeding.
